

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

<i>Gonorrhœa</i> ,	- - 16	Febrile and bowel complaints of children.
<i>Morbi infantiles</i> ,	- - -	

Fever, contrary to the hopes and expectations expressed in our last, still continues to make a prominent figure in our list, but of so mild a character in general as not to produce any great alarm; measles and small pox are to be seen in great numbers in every street; the hooping cough, so long a stranger to us, has again made its appearance, and as it is a disease that is generally mild in proportion as the subject whom it attacks is advanced in years, it will be prudent in parents to prevent their children, if very young, from being exposed to its influence, for that it is highly contagious, is an opinion very universally received among gentlemen of the medical profession. The case of scarlet fever recorded in this catalogue, was not under the Reporter's care, but he had an opportunity of seeing it, and it terminated in the most favourable manner, nor has the contagion as yet spread any farther. Vaccination goes on with great rapidity, and from a regulation adopted at the dispensary, of devoting a portion of time every Tuesday and Saturday, for the inoculation of all persons who may attend, the poor can have no excuse if they should neglect to avail themselves of it. The Reporter has been favoured by a medical friend, with a sight of a disease very rare in this country, viz. "Lepra Ichthyosis" of Sauvage; the subject is a girl 12 years old, the disease has been of seven years duration: what may be the effect of the plan proposed for the removal of this most loathsome disease, it is difficult to conjecture, but the result shall be published in a future report.

NATURALIST'S REPORT.

From June 20, till July 20.

Wound o'er the hedge-row's oaken boughs
The woodbine tassels float in air,
And blushing, the uncultured rose,
Hangs high her beauteous blossoms there;
Her fillets there the purple nightshade weaves,
And pale bryonia winds her broad and scallop'd leaves.

The pleasure of Spring is often so alloyed with the chill north east, and nipping frosts, that until summer is confirmed it is scarcely possible to calculate how much we should rejoice on beholding the fairest expansion of the flowers, and it has often been said that the painting of the poet when he sung the beauties of spring was ill suited to our unsteady climate; but summer with more manly pace advancing, clears away our doubts, gives certainty to our hopes and fears, and the vegetable creation, recovered from the rigours of winter, displays one universal robe of ever delightful green, and animals enjoy a pleasure unknown where the sun ripens the pine apple, and the palm, prince of the vegetable world, waves his exalted head.

20, Corn Spurry (*Spergula arvensis*) flowering.

23, Blue Argus Butterfly (*Papilio Argus*) very common. Marsh Lousewort (*Pedicularis palustris*) flowering.

25, Mountain Thistle (*Carduus pratensis*). Broad-leaved Marsh Orchis (*Orchis latifolia*) and two leaved Butterfly Orchis (*Orchis bifolia*) White Ox-eye Daisy (*Crysanthemum leucanthemum*) and common Honeysuckle (*Lonicera Periclymenum*) flowering.

26, Wild Roses (*Rosa canina*, *Ros. tomentosa*, *R. scabriuscula*, & *R. spinosissima*) in full flower.
 27, Flax (*Linum usitatissimum*) and beautiful St. John's wort (*Hypericum pulchrum*) flowering.
 28, Climbing field Rose (*Rosa arvensis*) and Corn Marygold (*Chrysanthemum segetum*) flowering.
 July 1, Flowering Rush (*Butomus umbellatus*) flowering.
 Oats shooting, Wheat and some Potatoes flowering.
 2, Common Orange lily (*Lilium bulbiferum*, variety) flowering.
 6, Tawney day Lily (*Hemerocallis fulva*) flowering.
 7, Upright Hedge Parsley (*Caucalis anthriscus*) flowering.
 Rail (*Gallinula crex*) considerable numbers yet calling in the evenings.
 8, Broad leaved Campanula (*Campanula latifolia*) flowering.
 9, Gum Cistus (*Cistus ladaniferus*) flowering.
 11, Yellow Ladies Bedstraw (*Gallium verum*) flowering.
 12, Black, White, and Red Currants becoming ripe.
 13, Evergreen Climbing Rose (*Rosa sempervirens*) and Peruvian Squill (*Scilla peruviana*) flowering.
 14, Yarrow (*Achillea millefolium*) and Sneezewort (*A. ptarmica*) flowering.
 15, Common Heath (*Erica vulgaris*) flowering.
 16, White Lily (*Lilium album*) flowering.
 19, Sea Starwort (*Aster Tripolium*) flowering.

METEOROLOGICAL REPORT.

From June 20, till July 20.

Most people must have heard old persons lament how much the seasons have changed since they were young. Instead of the fine, dry, and warm weather, which they experienced in their youth, our summers are remarkable at present for their cold and moisture, and our winters for dark and disagreeable cold weather, without fine and invigorating frost. Now from an examination of meteorological registers, we have reason to suppose these remarks unfounded in actual observation, and from our observations of the present season, we think, if their blood is not become too much cooled to be again heated, they may experience the same pleasure which the seasons formerly conveyed.

June 20,	26	- - - - -	Fine days,
27,	- - - - -		Wet morning and evening,
28, 29,	- - - - -		Dark dry day,
30,	- - - - -		Dark day, wet evening,
July 1,	- - - - -		Dark day,
2,	- - - - -		Fine, but cold,
3,	- - - - -		A trifling shower,
4,	- - - - -		Showery,
5, 11,	- - - - -		Fine,
12,	- - - - -		Some showers,
13, 14,	- - - - -		Fine,
15,	- - - - -		Dark, dry, windy day,
16,	- - - - -		Fine,
17,	- - - - -		Light showers,
18, 20,	- - - - -		Fine.

During this period the Barometer has stood about 30 with little variation.

The lowest point at which the Thermometer was observed, was on the morning of the 3d of July, when it stood at 52, at 8 A. M. and the highest was on the 23d. of June when it stood at 2 P. M. as high as 76.

The wind has been in the Northern points 17, times, Western 3, South 2, East 2, and the intermediate points have been almost regularly N. E.

CELESTIAL PHENOMENA.

FOR AUGUST 1809.

FIRST, The Moon rises at 17 min. past 10 p. m. just before Jupiter, and to the east of her are the three first stars of the Ram. During the night her passage by that planet will excite attention from observers. She sets the next morning at 23 min. past 12.

Fifth, On this evening she will be seen directing her course towards the fourth star of the Bull, which she does not pass till after Sun-rise. At 40 min. past 10 in the morning, she passes the 5th Star in the Bull, or the Bull's eye, the brightest star near Aldebaran, in the direction from that star to the Pleiades.
